

TRANE®

For 208v units, must use kit for 200v chillers.

General Service Bulletin

Selection Of Parts To Replace MOD00275

Order Number: **PART-SVB19A-EN**

DATE: March 22, 2008

Literature change history

PART-SVB19A-EN (March 2008) bulletin first release.

Introduction

The purpose of this bulletin is to advise customers of the parts required to substitute Tracer™ CH530 chiller controller components for the control originally used in CGAD, CGAE, CGWD, CGWE and CCAD units. The control named Cyclone or MOD00275 will be phased out and the parts mentioned below will be the most up-to-date and cost effective substitutes.

Figure 1. MOD00275 installed in a 60 ton air cooled unit

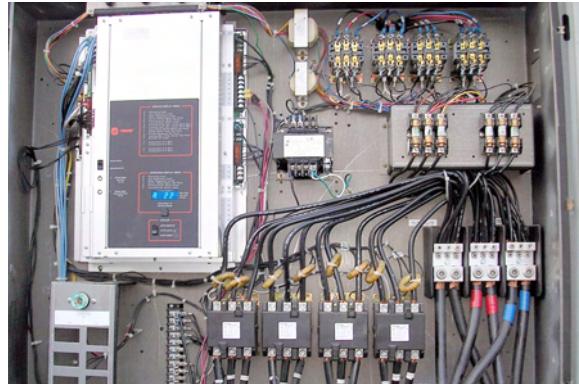

Figure 2. Air cooled 60 ton control panel sections with CH350 components

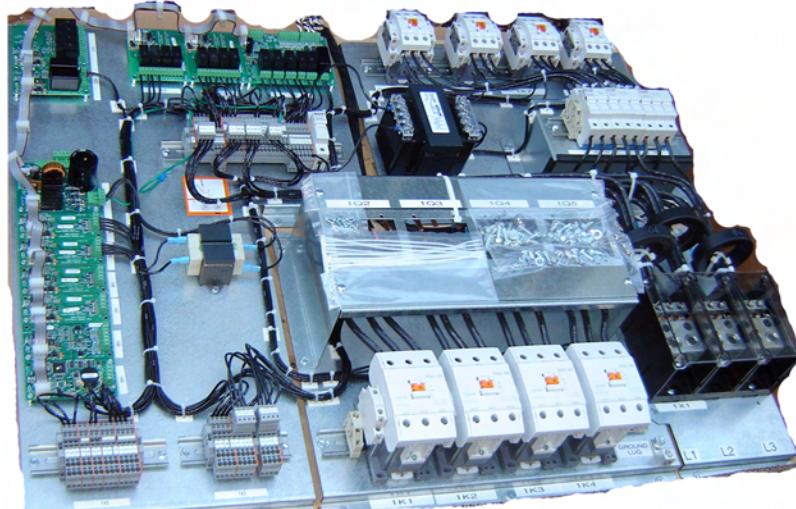

Figure 3. Water cooled 30 ton control panel with CH530 components

Discussion

The part numbers listed below consist of the new control panels and installation kits. Note that both a control panel and an installation kit are required for each unit upgrade. Existing unit type, voltage, tonnage and whether the unit is a high condenser temperature for water cooled units will be required to make the selection. A flow switch will be required to prove flow through the evaporator and must be installed if it doesn't already exist. Reference the unit parts list for the recommended flow switch.

Benefits of the Tracer™ CH530 chiller controller components include:

- All new panel components
- Improved performance, serviceability and reliability
- Expanded interoperability with building automation systems (ex COM 5)

Depending on the unit type, the control panel will ship in one of two configurations.

- Water cooled units will have a completely new control panel and components including enclosure and doors. See Figure 3.
- Air cooled units reuse the existing unit control panel enclosure. New components are assembled to three back panels to upgrade the existing control panel as shown in Figure 2 (p. 2).

The required installation kits consist of the various sensors, transducers, global connectors, etc. to wire to the new control panel. A COM3 board is supplied with all new panels.

The ship with literature for the KIT is file number PART-SVN107A-EN, or the latest version of this manual.

Parts ordering information

Obtain the required parts from the local Trane Parts Center. If the specific part number can not be determined, contact the local Trane Parts Center with the unit model number or serial number.

Select a CH530 control panel and installation kit based on the existing unit type, voltage and tonnage per the following tables. Be sure to order the new control panel and the kit. Both items are required.

Note: Be very careful to use the table which applies to the unit involved. Using the wrong table will result in the wrong parts being ordered.

Other parts to consider ordering for specific application options:

- MOD01683 where COM5 is required.
- COI00993 if the machine has hot gas bypass. This is the solenoid valve coil that will need to be changed.
- KIT15059 if a water cooled machine requires condenser temperature sensing. This includes the sensors, cable and wells.
- Required - Flow switch for the chilled water loop. Consult unit parts list.
- When a new Disconnect switch is required refer to the unit parts list. The new panels ship only with terminal blocks.
