VRF-PRC008D-EN

Ingersoll Rand

Introduction

Trane® variable refrigerant flow (VRF) systems are efficient, effective, reliable heating and cooling solutions that you can trust. VRF is well suited for historic buildings without existing ductwork, as well as schools and mid-rise office buildings with multiple interior spaces and diverse occupancy rates. When VRF is the right solution for your application, Trane will help you ensure that it is the best solution.

Trane VRF systems are designed for exceptional energy efficiency, offering industry-leading performance up to 40.00 IEER and 34.50 SCHE. Trane VRF systems utilize inverter compressors (some model feature dual compressors) with vapor injection for improved performance and comfort.

Systems are available for both heat pump and simultaneous heating and cooling operation. Both feature individual zone control to provide individual occupant comfort. The simultaneous heating and cooling models offer the ability to heat and cool adjacent zones, intelligently exchanging energy between them through strategically located mode control units.

Indoor units are available in a wide variety of configurations and capacities, allowing architects the flexibility to satisfy almost any design requirement.

Trane offers a complete line-up of controls to complete your VRF installation. These range from easy to use individual zone controls to centralized systems for building monitoring and control, as well as optional BACnet®connectivity for centralized Trane Tracer™ integration.

System Features

- Individual modules are available as standard heat pump or simultaneous heating and cooling (heat recovery) configuration; units can be combined as double or triple modules for larger capacity requirements.
- Asymmetric scroll is designed to minimize frictional loss.
- 100% full heating capacity at -13°F (-25°C).
- Dual inverter compressors are designed to equally share load for higher reliability.
- Improved flash injection system increases refrigerant flow rate resulting in superior heating performance.
- Intercooler uses a plate heat exchanger for improved heating and cooling efficiency.
- 8,400 RPM (maximum speed) compressors assures quick start cooling and heating performance.
- Auto oil balancing eliminates the need for an oil balancing pipe.
- Compressor inverter drives are liquid cooled for improved reliability.
- Longer pipe lengths are the result of large oil storage capacity and low oil circulation rate.
- Total harmonic distortion is reduced through adaptive sine wave control.
- Refrigerant pump down and pump out facilitates maintenance and repair.
- Automatic refrigerant balancing between indoor units optimize refrigerant distribution for better comfort and performance.
- Optional quiet operation mode for reduced sound levels at night.
- Auto snow blowing function removes accumulated snow when conditions require it.
- Intelligent defrost cycle minimizes defrost occurrence based on actual conditions.
- Special hydrophilic heat exchanger coating minimizes frost build up on the outdoor coils and facilitates the defrost cycle.
- Anti-corrosion finish provides added protection in harsh environments.
- Multiple options of mode control units are light and compact. Distributed installation flexibility provides superior performance during simultaneous heating and cooling operation.
- VRF systems feature self-diagnosis, including system monitoring and error code reporting.

Model Number Description

Digit 1 — Refrigerant

4 = R410A

Digit 2 — Brand name

T = Trane

Digit 3 — System type

V = Variable Refrigerant Flow

Digit 4 — Functional type

H = Heat pump, DC inverter (VRF)

R = Heat recovery (three pipe), DC inverter

Digit 5 — Special application

0 = Standard

**Digit 6, 7, 8 — Nominal capacity
(Btu/h x 1,000)**

072 = 72,000 Btu/h (VRF)

096 = 96,000 Btu/h (VRF)

120 = 120,000 Btu/h (VRF)

144 = 144,000 Btu/h (VRF)

168 = 168,000 Btu/h (VRF)

192 = 192,000 Btu/h (VRF)

Digit 9 — Major development sequence

C = Third development sequence

Digit 10 — Electric power supply characteristics

3 = 208–230/60/1

4 = 460/60/3

Digit 11 — Coil fin protection

0 = Standard

Digit 12 — Miscellaneous digit

0 = Not currently used

Digit 13 — Region of sale

N = North America (UL or ETL)

Digit 14 — Minor design sequence

A = First design sequence

B = Second design sequence

C = Third design sequence

D = Fourth design sequence

System Combination Line-Up

	Heating	°F	-13 – 75	-13 – 75	-13 – 75

Notes:

1. Nominal capacity based on 25 ft of equivalent refrigerant piping with 0 ft level difference.
 - **Cooling:** Indoor temperature 80°F DB, 67°F WB/Outdoor temperature 95°F DB, 75°F WB
 - **Heating:** Indoor temperature 70°F DB, 60°F WB/Outdoor temperature 47°F DB, 43°F WB
2. Rated per AHRI-1230 Standard conditions
3. Actual length (equivalent length in parenthesis)
4. If the outdoor unit is installed above the indoor unit, the allowable height difference is 361 ft. If the outdoor unit is installed below the indoor unit, the allowable height difference is 131 ft.
5. Sound pressure was acquired in a dead room. Actual noise level may be different depending on installation conditions.
6. -13°F cooling with low ambient cooling kit.

	Heating	°F	-13 - 75	-13 - 75	-13 - 75	-13 - 75

Notes:

1. Nominal capacity based on 25 ft of equivalent refrigerant piping with 0 ft level difference.
 - **Cooling:** Indoor temperature 80°F DB, 67°F WB/Outdoor temperature 95°F DB, 75°F WB
 - **Heating:** Indoor temperature 70°F DB, 60°F WB/Outdoor temperature 47°F DB, 43°F WB
2. Rated per AHRI-1230 Standard conditions
3. Actual length (equivalent length in parenthesis)
4. If the outdoor unit is installed above the indoor unit, the allowable height difference is 361 ft. If the outdoor unit is installed below the indoor unit, the allowable height difference is 131 ft.
5. Sound pressure was acquired in a dead room. Actual noise level may be different depending on installation conditions.
6. Cooling operation between 23°F and 5°F requires twin porting of the applicable indoor units.
7. -13°F cooling with low ambient cooling kit.

Operating temp range	Cooling	°F	23 – 120 (-13 to 120, see footnote 6)		23 – 120 (-13 to 120, see footnote 6)		23 – 120 (-13 to 120, see footnote 6)	
	Heating	°F	-13 – 75		-13 – 75		-13 – 75	

Notes:

1. Nominal capacity based on 25 ft of equivalent refrigerant piping with 0 ft level difference.
 - **Cooling:** Indoor temperature 80°F DB, 67°F WB/Outdoor temperature 95°F DB, 75°F WB
 - **Heating:** Indoor temperature 70°F DB, 60°F WB/Outdoor temperature 47°F DB, 43°F WB
2. Rated per AHRI-1230 Standard conditions
3. Actual length (equivalent length in parenthesis)
4. If the outdoor unit is installed above the indoor unit, the allowable height difference is 361 ft. If the outdoor unit is installed below the indoor unit, the allowable height difference is 131 ft.
5. Sound pressure was acquired in a dead room. Actual noise level may be different depending on installation conditions.
6. -13°F cooling with low ambient cooling kit.

3. Actual length (equivalent length in parenthesis).
4. If the outdoor unit is installed above the indoor unit, the allowable height difference is 361 ft. If the outdoor unit is installed below the indoor unit, the allowable height difference is 131 ft (131 m).
5. Sound pressure was acquired in a dead room. Actual noise level may be different depending on installation conditions.
6. Refer to the "["Outdoor Unit Operation Limits," p. 68](#) section of this document.
7. Requires two each 4TDK3819B0000A and 4TDK3100B0000A outdoor unit Y-joint connections.
8. -13°F cooling with low ambient cooling kit.

Outdoor Unit Operation Limits

Notes:

- For Figure 1, p. 68 and Figure 2, p. 68, it is recommended that wind baffles be used for outdoor units that produce cooling below an ambient temperature of 23°F (-5°C).
- For Figure 1, p. 68:
 - Cooling operation below 23°F (-5°C) heat pumps and 5°F (-15°C) heat recovery require installation of low ambient cooling kits and front and rear wind baffles.

Figure 1. Cooling

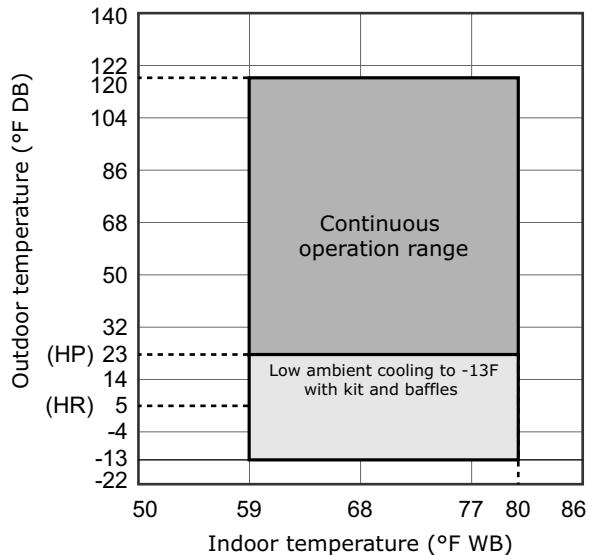

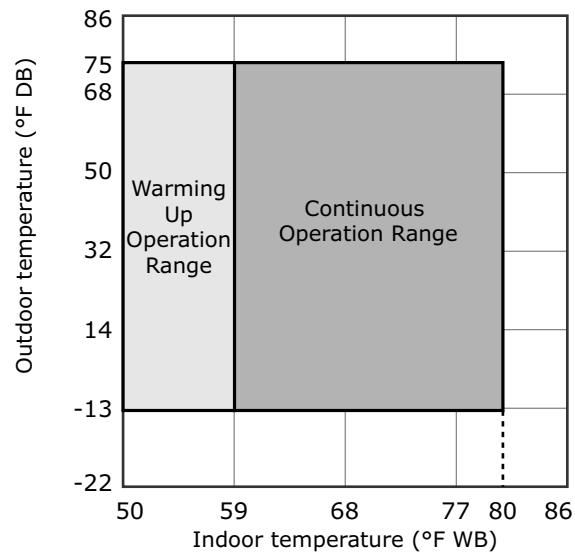

Figure 2. Heating

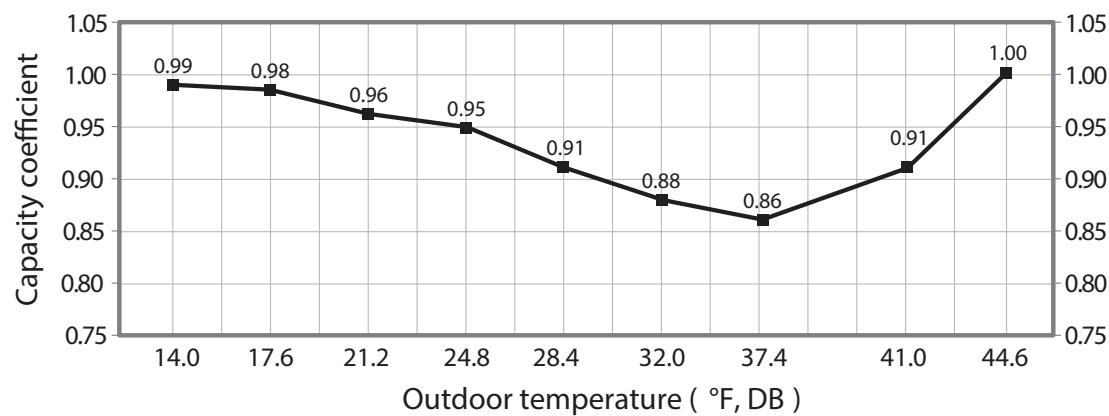

Defrosting Correction Factor

In heating operation, frost can be formed on heat exchanger according to outdoor temperature. (frost on heat exchanger results in decreasing the performance.) To remove frost on heat exchanger of outdoor unit, defrost operation is carried out periodically. During defrost operation, capacity of outdoor unit may decrease. The decrement is not considered to the individual capacity tables.

Outdoor temperature (°F, WB)	14	17.6	21.2	24.8	28.4	32.0	37.4	41.0	44.6
Capacity coefficient	0.99	0.98	0.96	0.95	0.91	0.88	0.86	0.91	1.00

4TVH/R0192C300NA, 4TVH/R0192C400NA	64

Notes:

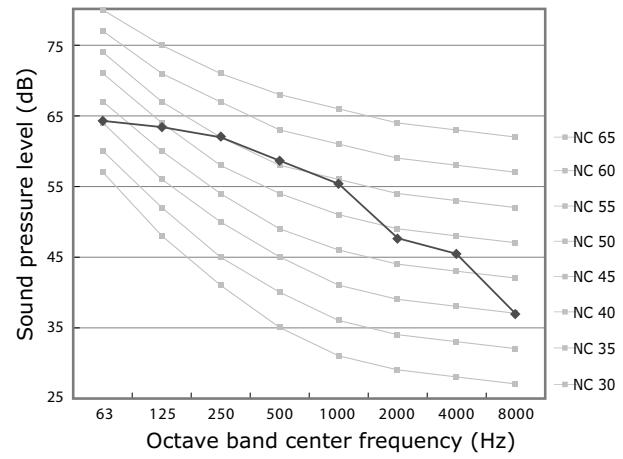

- *Measuring place: Anechoic chamber (conversion value)*
- *These operation sound value were obtained in a anechoic room. Sound pressure level will vary depending on a range of factors such as the construction of the particular room where the equipment is installed.*
- *Operation sound level may differ depending on operation and ambient conditions.*

Dimensional Drawings

Figure 16. Dimensional drawing: 4TVH0072C*00NA/4TVR0072C*00NA

Units: inches

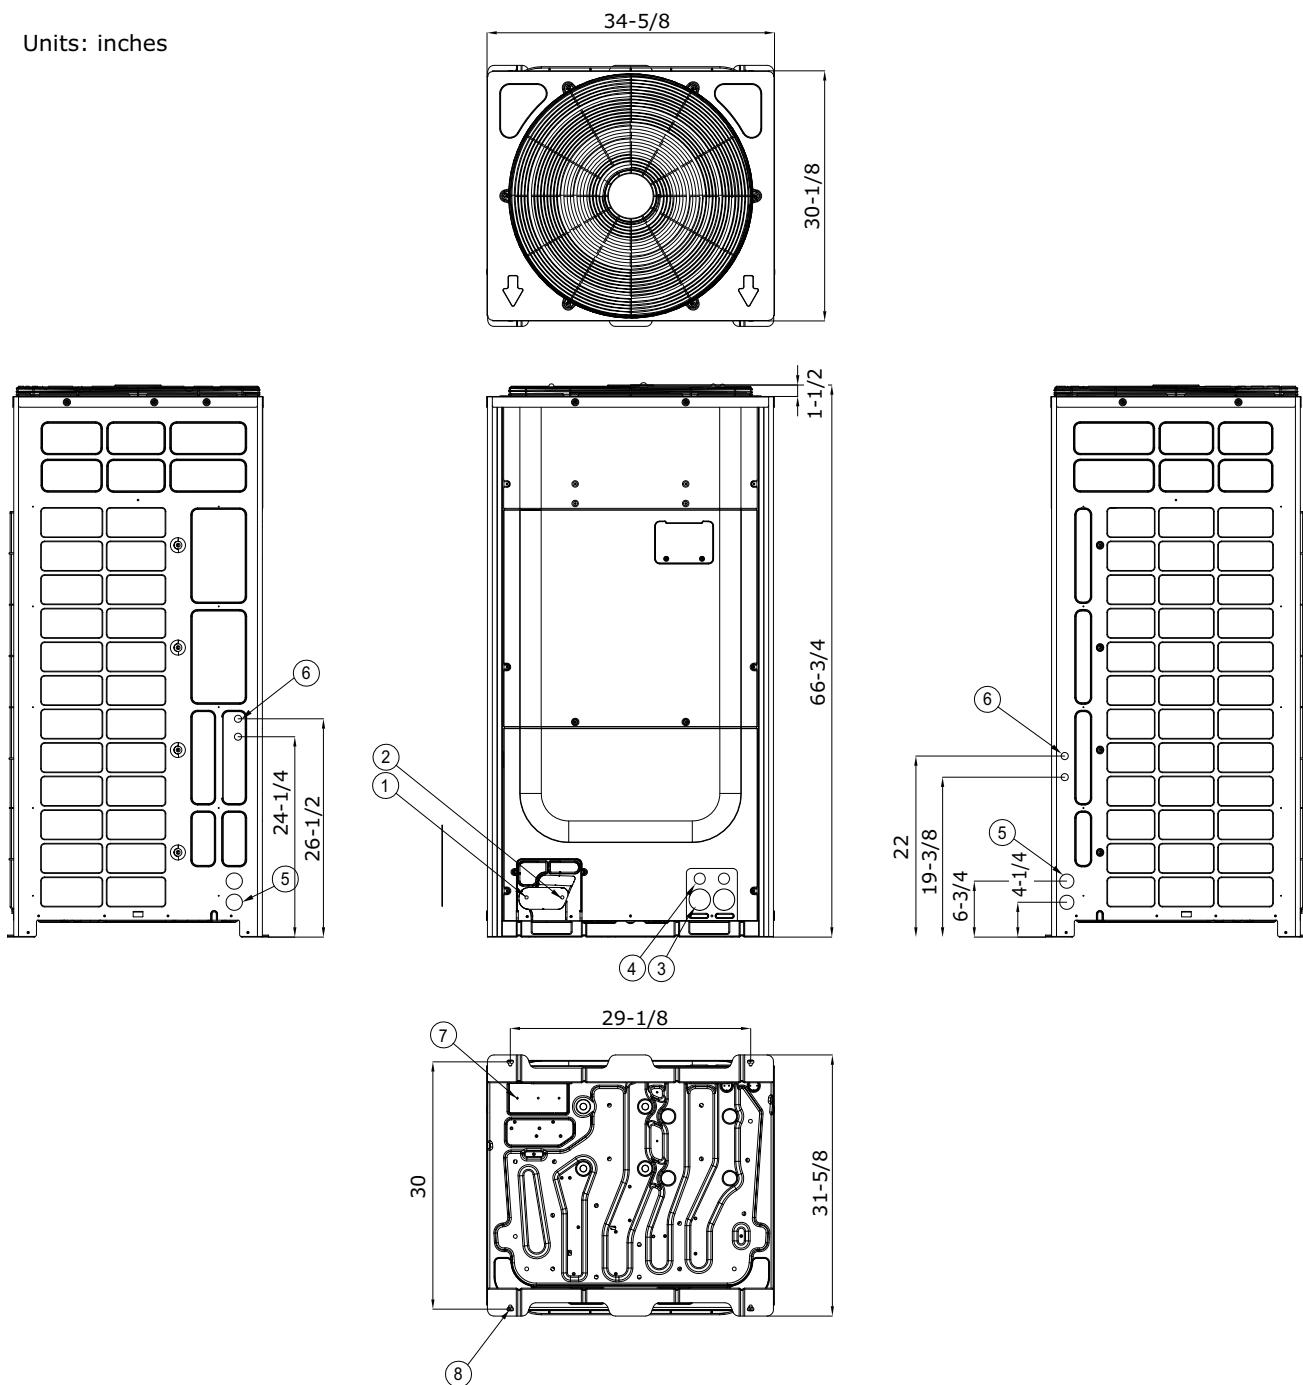

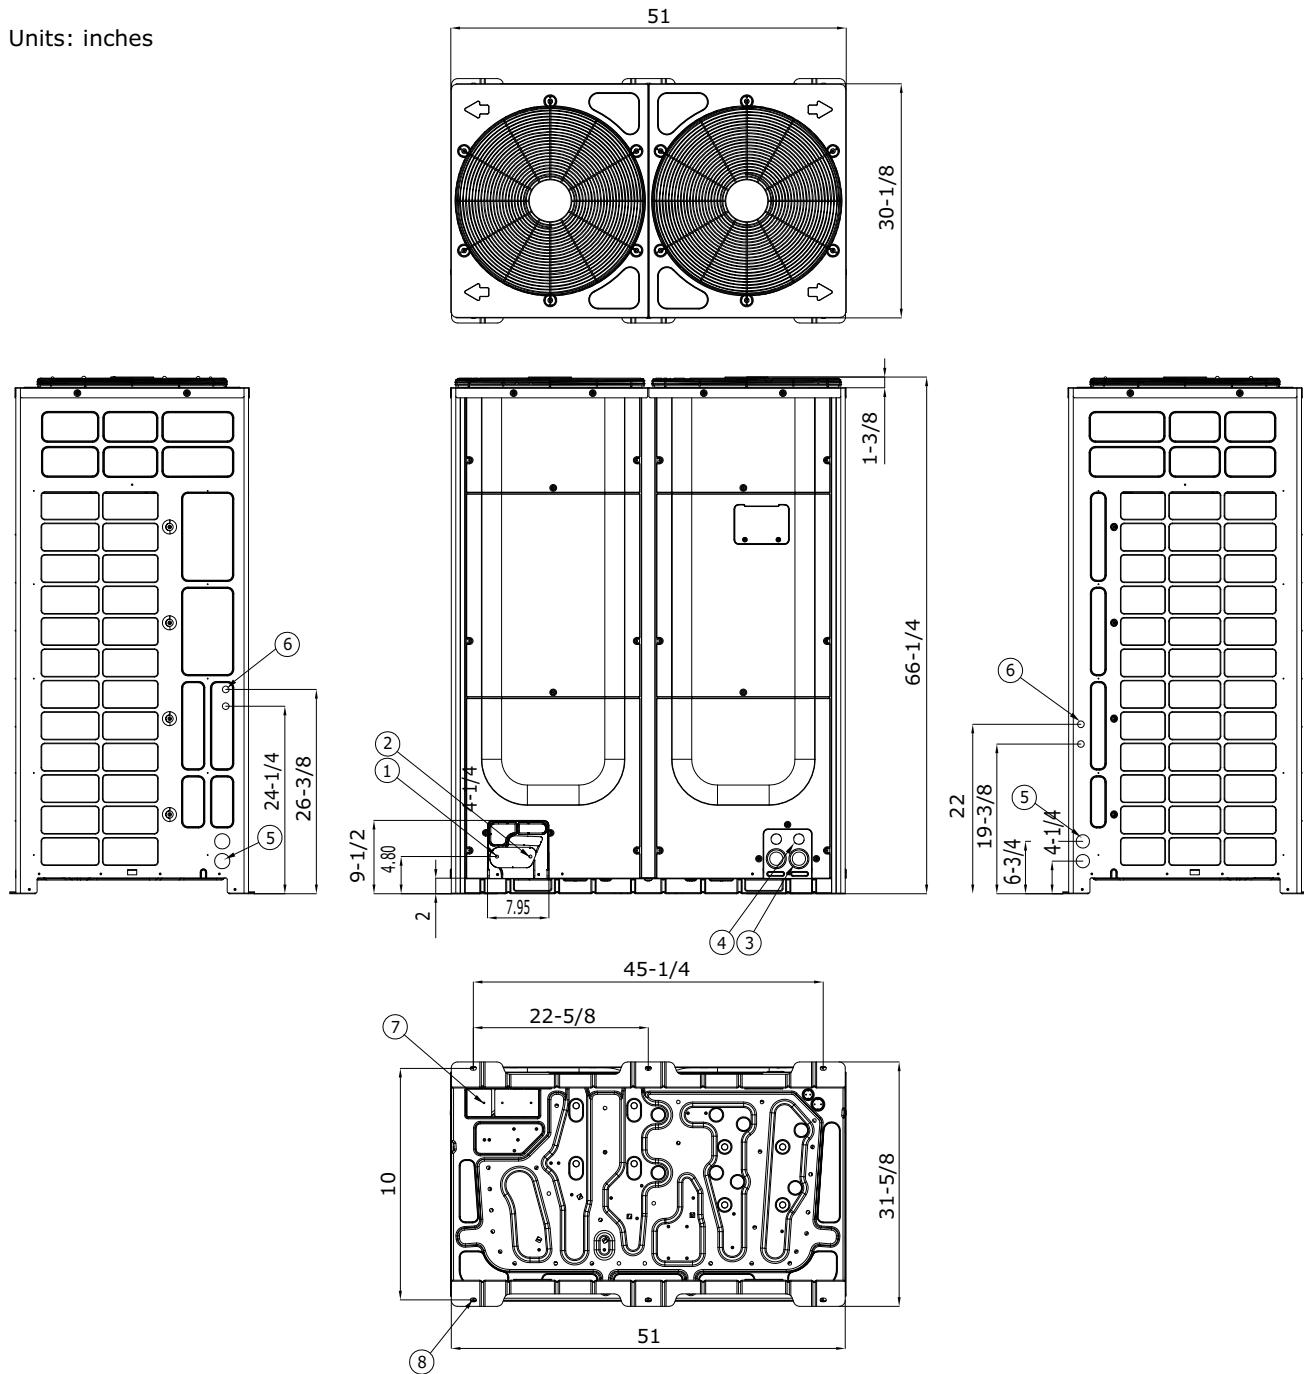

Figure 17. Dimensional drawing: 4TVH0096/120/144/168/192/C*00NA, 4TVR0096/120/144/168/192/C*00NA

Units: inches

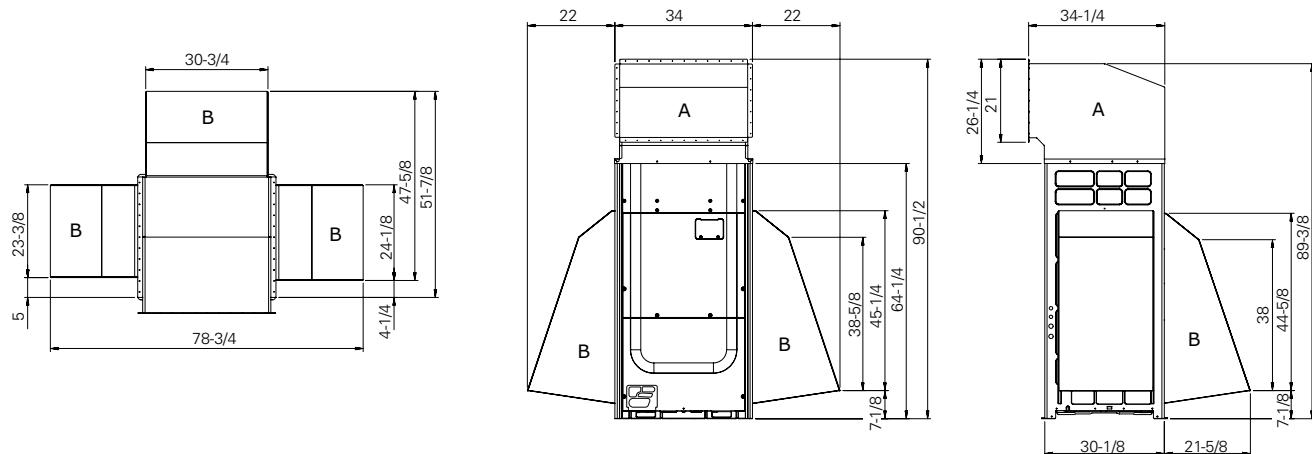

Dimensional Drawings

Figure 18. Dimensional drawing of units with low ambient cooling kit and optional wind baffles: 4TVH0072C*00NA and 4TVR0072C*00NA

Units: inches

A: Optional condenser low ambient cooling kit
B: Optional wind baffle/discharge air hood

A wind baffle should be installed:

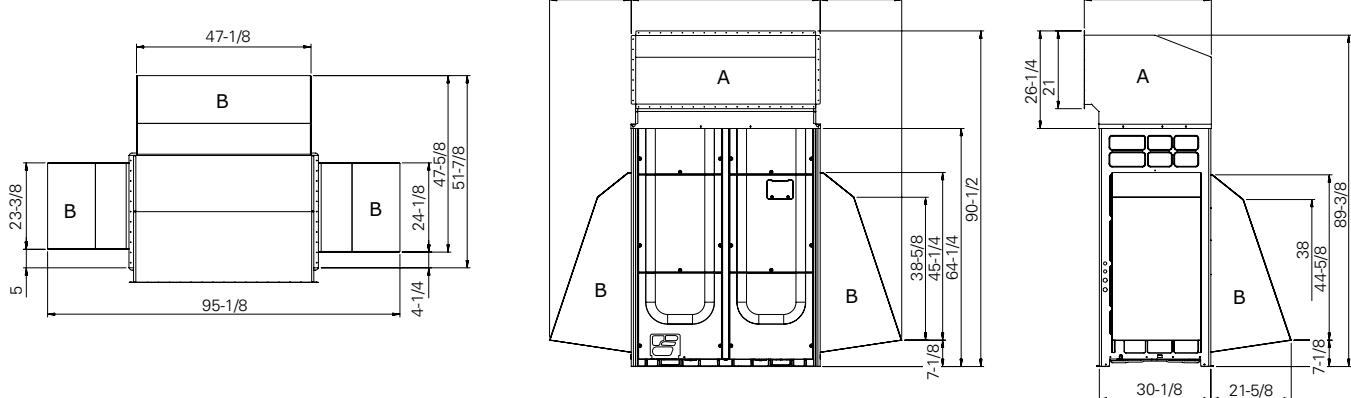

- To prevent snow from accumulating on the outdoor unit and the risk of accumulated frost, which may interfere with normal heating operation.
- To protect the unit from humid air, such as near a sea shore.
- Heat pump applications require the use of low ambient cooling between 23°F and -13°F. They also require the use of low ambient cooling kits.
- If the prevailing wind is not blowing into the low ambient cooling kit.
- The discharge air is not directed to the enclosed area.

Install the baffle so that:

- The height (h) of the frame or base should be a minimum of 12 inches plus the additional height of the heaviest expected snowfall. (Example: If the base height is the minimum 12 inches and the heaviest expected snow load is 6 inches, then $h = 12 \text{ inches} + 6 \text{ inches} = 18 \text{ inches}$).

Figure 19. Dimensional drawing of units with low ambient cooling kit and optional wind baffles: 4TVH0096/120/144/168/192C*00NA and 4TVR0096/120/144/168/192/C*00NA

Units: inches

A: Optional condenser low ambient cooling kit
B: Optional wind baffle/discharge air hood

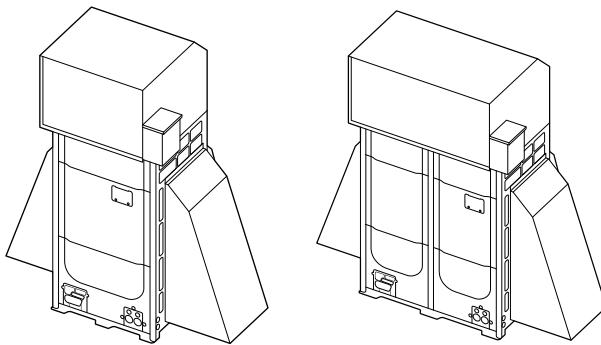

Wind Baffle (recommended)

A wind baffle should be installed:

- To prevent snow from accumulating on the outdoor unit and the risk of accumulated frost, which may interfere with normal heating operation.
- To protect the unit from humid air, such as near a sea shore.
- Heat pump applications require the use of low ambient cooling between 23°F and -13°F. They also require the use of low ambient cooling kits.
- If the prevailing wind is not blowing into the low ambient cooling kit.
- The discharge air is not directed to the enclosed area.

Install the baffle so that:

- The height (**h**) of the frame or base should be a minimum of 12 inches plus the additional height of the heaviest expected snowfall. (Example: If the base height is the minimum 12 inches and the heaviest expected snow load is 6 inches, then **h** = 12 inches + 6 inches = 18 inches).

Notes

Ingersoll Rand (NYSE: IR) advances the quality of life by creating comfortable, sustainable and efficient environments. Our people and our family of brands — including Club Car®, Ingersoll Rand®, Thermo King® and Trane® — work together to enhance the quality and comfort of air in homes and buildings; transport and protect food and perishables; and increase industrial productivity and efficiency. We are a global business committed to a world of sustainable progress and enduring results.
